Assembly Instructions

Air Barrel

① Locate the valve on the side of your Air Barrel. Twist counter-clockwise to unscrew the dust cover for the valve.

Attach your Bungee Valve Adapter to the valve, twisting clockwise. Attach the hose of your pump to the adapter on the valve and inflate.

② 

③ To make your Air Barrel softer or for slow deflation press the button in the valve.

WARNING

- Serious injury (including permanent paralysis or death) could result from any activity involving motion, rotation or height.
- All users of this equipment assume this risk of serious injury.
- Mats and pits cannot and do not eliminate hazards.

Safety Instructions

ALWAYS:

1. Consult an instructor prior to use.
2. Use equipment **ONLY** under the supervision of trained and qualified instructors.
3. Use equipment with trained spotters and the proper spotting equipment.
4. Check equipment before use for proper positioning; equipment can move during use.
5. Follow a progressive learning pattern. Assure basic skills are achieved before attempting more advanced skills.
6. Use equipment **ONLY** when all hard exposed surfaces are protected with proper mats.
7. Assure that all inflatable equipment has sufficient air pressure to avoid injury.

DO NOT use the apparatus with damaged, worn or missing parts.

DO NOT allow more than one person at a time to use the equipment.

For faster deflation twist the valve cap counter-clockwise and fully remove it from the Air Barrel.

④ 

Fully extended rubber stoppers

NOTE: If air is leaking from the valve, make sure the rubber stoppers are fully extended and not bent. (see photo to right)

NOTE: Tumbl Trak equipment is not recommended for the use in **Parkour/Free Running** related activities.
