About the Basic ***Life/form***® Child Airway Management Trainer Head 3

Additional Supplies to Upgrade the Manikin 4

Figure 1

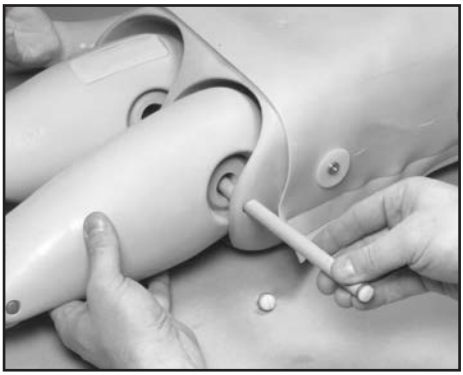

Figure 2

Basic *Life*/*form*® Child *CRiSis*™ Manikin

This full-body child manikin has been created to offer realistic training and practice of child airway management and CPR education. The Basic *Life*/*form*® Child *CRiSis*™ Manikin is anatomically correct in detail and represents the size of an eight-year-old child. Realistic anatomy and landmarks include a mouth, tongue, oral pharynx, larynx, epiglottis, arytenoids, vocal cords, trachea, and esophagus. In addition to the palpable and visual landmarks, the head, neck, and jaw are fully articulated, allowing a realistic jaw thrust feature. This manikin has separate left and right lungs for auscultation; has oral, nasal, and digital intubation capabilities; and includes an inflatable stomach bladder to indicate esophageal intubation. Also features E.T., E.O.A., P.T.L., L.M.A., E.G.T.A., and Combitube® insertion. This basic airway management trainer may be gradually updated to the *Life*/*form*® Child *CRiSis*™ or Deluxe Child *CRiSis*™ manikins by adding the available upgrades and the Interactive ECG Simulator (LF03670U). Includes pump spray lubricant. See page 4 for complete list of modular update components. Three-year warranty.

Assembly of Your Basic Child *CRiSis*™ Manikin

To facilitate packing, your manikin comes with the arms and legs unattached.

To connect the arms to the torso, place each in a position such that the hand is above the head. ***(See figure 1.)***

Align the arm fitting with the torso socket and plug the arm into place. Finish by rotating the arm forward so it lies along the side of the body.

To connect the legs to the torso, simply slide the waist pin (supplied) through the torso and legs, pinning the legs in their correct position. ***(See figure 2.)***

About the Simulator

The Basic ***Life/form***® Child Airway Management Trainer Head is the most realistic simulator available for the training of intubation and resuscitation skills. Nasco has taken great care to create a trainer that is anatomically correct in respect to both size and detail.

Landmarks include nostrils, teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false and true vocal cords, cricoid ring, tracheal rings, trachea, esophagus, lungs, and stomach.

The Basic ***Life/form***® Child Airway Management Trainer Head allows you to practice oral, digital, and nasal intubation, as well as CPR. Suction techniques can also be performed and evaluated. The simulator was designed to use an uncuffed endotracheal tube measuring up to 5.0 mm I.D.

List of Components

- Child Airway Management Trainer Head
- Right and Left Lung Simulators
- Stomach Simulator
- Pump Spray Lubricant
- 3 Nylon Hose Clamps

Figure 3

Lubrication

Before using the Basic ***Life/form***® Child Airway Management Trainer, lubricate both the oral cavity and the endotracheal tube with the pump spray lubricant provided. ***(See figure 3.) Note:*** Nasco recommends the use of the provided lubricant or a similar vegetable-based lubricant for the Child Trainer. The use of a silicone-based or similar lubricant may seriously damage the simulator, thus voiding Nasco's warranty on the trainer.

Cleaning the Face

Normal soil can be removed from the face with mild soapy water. Nasco Cleaner (LF09919U) will remove stubborn stains. Simply apply Nasco Cleaner to soiled area and wipe clean with a soft cloth or paper towel. ***Note:*** Avoid using cleaner around mouth area if students will be applying direct mouth-to-mouth resuscitation techniques, as the cleaner may be toxic if ingested. NEVER place the trainer on any kind of printed paper or plastic. These materials, as well as ball-point pens, will transfer indelible stains. Do not use any cosmetics.

Available Supplies

LF03631U Replacement Headskin with Airway
LF03627U Replacement Lungs
LF03628U Replacement Stomach
LF03644U Pump Spray Lubricant
LF09919U Nasco Cleaner
